

Svanehoj LTD Gauges

The integral component in
LNG storage tank solutions

SVANEHOJ
— An ITT Company

Built on what you know. Improved in every way.

Svanehoj introduces a new and improved LTD sensor – built on the same proven design the market has relied on for decades but now refined with advanced technology to meet the demands of tomorrow.

The new sensor is designed as a plug-and-play solution and fits seamlessly into existing systems – making upgrades easy and more cost-efficient. Exposed to the most rigorous testing, also in real-world LNG conditions, the LTD sensor is ready to set new and higher standards, as well as peace of mind.

- Enhanced durability and improved density sealing for long-term performance
- Wider calibration span for easier maintenance and more flexible repair options
- Helium pressure and leak tested, including 100% measuring and test protocol for each unit.

Certified calibration for maximum performance

We have expanded our in-house capabilities in Calais with a new calibration lab for tank gauging sensors, becoming the first in the cryogenic storage industry to offer certified sensor calibration – not only for Svanehoj products, but for competitor solutions as well.

The sensor calibration lab helps you minimize downtime in LTD operations, reduces recalibration costs, and ensures that you keep receiving the most accurate data on density and temperatures.

- Certified calibration for all servo-driven LTD gauge brands within the cryogenic storage industry
- More accurate data to support faster, more informed decision-making in daily operations
- A one-stop partner supporting you throughout the entire lifecycle of your installation

The new facility will reinforce the ongoing commitment to reliability, efficiency, and industry-leading service.

NEW SVANEHOJ LTD SENSOR

Your trusted partner in LNG tank storage solutions

With the introduction of our new LTD Density Sensor and the launch of our certified in-house calibration laboratory, Svanehoj sets a new global standard for precision and performance in the cryogenic storage industry.

As a company of more than 500 specialists worldwide, we bring unmatched expertise, knowledge, and commitment to every project we deliver. Our scale and experience make us a trusted and reliable partner - ensuring that every installation, service, and operation meets the highest standards of quality and safety.

Driven by innovation and backed by decades of proven results, Svanehoj is the global leader in advanced sensor technology and LNG tank control systems.

From onshore LNG terminals to complex industrial applications, our solutions combine cutting-edge technology with the reliability our customers have relied on for almost a century.

At Svanehoj, we don't just follow industry standards. We define them. Through continuous innovation, technical excellence, and a deep understanding of our customers' needs, we continue to lead the way in shaping the future of cryogenic storage and LNG tank management.
