

European Pump Services

SVANEHØJ
An ITT Company

Turnkey pump solutions for industrial facilities

EPS is an integrated pump specialist delivering turnkey pump solutions for the industrial, offshore, and maritime sectors, built exclusively on proven, best-in-class technology.

Acting as a link between single component manufacturers and end users, we add value where pumping requirements demand absolute system responsibility, specialist expertise, and seamless integration. From tank terminals to refineries to vessels, we ensure that every solution is engineered to fit each customer's specific needs and operational reality – supporting long-term efficiency and future-ready operations.

Built upon premium technology

We build our turnkey pump solutions on original, premium pump technology from renowned manufacturers. By selecting the best components from Bornemann, Goulds, Apollo, and Svanehoj, every system is designed to deliver unmatched reliability, efficiency, and operational excellence.

At EPS, we combine this world-class pump technology with end-to-end engineering, installation, and service, creating solutions that are safe, environmentally responsible, and fully optimized for customer's operational needs.

The result is turnkey solutions that minimize downtime, maximize uptime, and provide long-term reliability – turning complex pumping challenges into high-efficiency operations for industrial, maritime, and offshore applications.

A part of Svanehoj

Svanehoj is a global specialist in pumps and systems for handling critical liquids, trusted worldwide for its engineering excellence, proven technology, and commitment to reliable and efficient operations.

From high-performance pumps to complete system solutions, Svanehoj leads the way in long-lasting performance for the most demanding applications.

As part of Svanehoj, EPS brings turnkey pump expertise to these strengths.

This includes delivering fully integrated solutions - from design and installation to operation and service - ensuring reliable, efficient, and safe performance across every project.

Integrated solutions across sectors

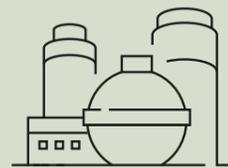

Maritime

In the maritime sector, we deliver pumping solutions that support safe, efficient, and compliant vessel operations. Our systems are designed for reliability at sea, minimal maintenance, and seamless integration onboard.

Typical applications include:

- Cargo and fuel handling
- Ballast and bilge operations
- Tank cleaning and stripping systems

By combining proven pump technology with intelligent system design, EPS helps shipowners and operators reduce downtime, improve energy efficiency, and meet regulatory requirements.

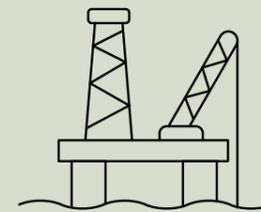

Terminals

For tank storage facilities and terminals, we provide high-performance pumping solutions for the transfer, circulation, and handling of a wide range of liquids.

Typical applications include:

- Loading and unloading of fuels, chemicals, and speciality fluids
- Precise metering, dosing, and flow control for accurate operations
- Integration with terminal automation, safety and monitoring systems

Whether handling fuels, chemicals, or specialty liquids, we work closely with operators and EPCs to ensure safe operations, optimized throughput, and long-term system integrity.

Offshore & Energy

Offshore environments place extreme demands on equipment. Our solutions are engineered to meet them. We support offshore installations with pumping systems designed for continuous operation, limited access, and strict safety standards.

Typical applications include:

- Process and utility pumping
- Transfer of fuels and technical fluids
- Integrated systems for offshore platforms and energy installations

With a focus on robustness, redundancy, and ease of service, we help operators maintain uptime and manage risk in some of the world's most demanding operating conditions.

Chemical Refineries

We deliver turnkey pump solutions that integrate seamlessly into your refinery operations. From design and engineering to on-site installation, we take ownership and ensure continuous efficiency and optimization.

Typical applications include:

- Process and utility pumping
- Product transfer and circulation
- Handling of complex fluids

By combining specialist pump engineering with full system responsibility, we simplify complex fluid handling, ensure reliable operation, and optimize efficiency in demanding chemical processing environments.

The turnkey advantage

Working with EPS gives you a clear and simple path through complex pumping challenges. Instead of coordinating multiple suppliers and managing countless components, you have a single partner responsible for the entire solution – designed, engineered, integrated, and optimized for your specific operations.

By partnering with us, you benefit from faster project delivery, seamless integration, and systems that work reliably from day one. We make sure every pump solution adds value and performs efficiently, so you can focus on running your business while we handle the complexity.

Components manufacturer

Design

Engineering

Commissioning

Maintenance

EPS engineers and installs multiples pumps, engines, a.o. into complex and innovative pumping solutions

EPS offers maintenance and service to end users

EPS delivers pump systems fit to customer operations

Component manufacturer

- OEM producer of pumps
- Limited local presence
- Limited or no relationship with end user
- No sales and service network

Design/feed

- Already involved in the design phase through front end engineering design assignments

Engineering

- Team of best in class engineers with experience and extensive knowledge

Commissioning and maintenance

- Installs and commissions multiple complex pumping solutions
- Offers maintenance and service for all pumping solutions

End-user

In need of:

- Complex pumping solutions
- In need of specialistic knowledge and service

A global service set-up

At EPS, we manage the entire lifecycle of your pump systems, whether it's Bornemann, Svanehoj, Goulds, Apollo or a third-party brand. From design and installation to ongoing operation and maintenance, we take full responsibility, providing customized service – even complete outsourcing is possible.

Our service teams deliver:

- 24/7 performance through preventive maintenance
- Condition monitoring
- Rapid repair
- Original spare parts supply – always available from stock
- Single point of contact and fully transparent support

Each year, we service more than 1,000 pumps, delivering field service, spare parts, service contracts, and comprehensive pump servicing, including displacement pumps.

Through this hands-on experience, we turn operational insight into continuous improvements that maximize uptime and performance.

Spare parts for continuous operation

With EPS, critical spare parts are readily available to minimize downtime and keep your operations running smoothly, wherever you are.

Our 24/7 global expert support, sale-or-return supply and inventory management services ensure rapid replacement, high system availability, and reliable performance, helping you maintain continuous, efficient, and safe production.
